Laboratory 4B: Design Techniques – Kenneth’s Question 4

4. A Furniture shop wishes to build a POS for their customers. The system should include a booking system for the serviceman and a system that would check the delivery status of the furniture. Further, it is expected that the price and inventory information will be reviewed and maintained in that system.

Design the UI for this shop’s POS, booking system, delivery system, purchasing system and inventory management system.

Explain your design, including the control.
